

Performance Reporting Update

February 2026

January 2026 Overview

January delivered **+12.3%** despite trading only half the month due to constrained liquidity and elevated volatility conditions. Our **Sigma hedging system** continues to perform as designed, dynamically adjusting exposure to control drawdowns during adverse market conditions. This disciplined approach to risk management is reflected in our strong risk-adjusted metrics: a **Calmar ratio of 7.38** demonstrates exceptional return relative to maximum drawdown, while our **Sortino ratio of 2.81** confirms downside volatility remains well-controlled.

Reporting Update

We are transitioning our primary performance reporting to **Quant.Space**, an institutional-grade third-party analytics platform that provides standardised risk-adjusted metrics. This change ensures our reporting aligns with institutional expectations while maintaining full transparency and auditability.

Verified Performance Metrics

Source: Quant.Space Report (30 January 2026)

Metric	Value
Cumulative Return	454.0%
CAGR	329.1%
Sharpe Ratio	1.88
Sortino Ratio	2.81
Calmar Ratio	7.38
Maximum Drawdown	-44.6%
Volatility (Annualised)	113.1%

Reporting Period

Start Date	27 November 2024
End Date	30 January 2026
Duration	14 months

Recent Performance

MTD (January 2026)	+12.3%
3-Month Return	+32.1%
6-Month Return	+104.8%
Best Month	+44.1%
Worst Month	-11.2%

Execution Quality

Exit Maker Rate	90.22%
Total Trades	221,929

Why Quant.Space

Quant.Space provides institutional-standard performance measurement with:

- **CAGR calculation** for standardised year-over-year comparison
- **Risk-adjusted metrics** (Sharpe, Sortino, Calmar) aligned with institutional due diligence requirements
- **Drawdown analysis** with recovery periods and depth measurement
- **Execution analytics** including maker/taker ratios and position-level statistics
- **Independent verification** via third-party platform with auditable methodology

Note on Historical Allo Reporting

Our historical reporting via Allo used **compound return methodology**, which chains monthly returns together (e.g., Month 1 return × Month 2 return × Month 3 return...). This methodology:

- Is mathematically correct for measuring actual capital growth
- Maintains continuity with all historical performance records
- Produces higher headline figures than CAGR or simple additive returns

For institutional comparison purposes, CAGR (329.1%) represents the standardised annualised growth rate and is the appropriate figure for benchmarking against other strategies.
