

A London-Session Continuation Model: 9.5 Years, 3 Markets, Frozen Rules

By Oscar-K-Trader (@OKTrader14) — Daytrader, indices/forex/metals/commodities · X thread, 22 July 2026

1/

Finalizing this monster project for now. It's my whole trading style in one chart. 9.5 years, 3 markets, frozen rules. What it is: a London-session continuation model. Thread:

2/

I take the higher-timeframe bias, wait for a pullback to sweep liquidity into a 4H/1H fair-value gap, let the 5-minute structure shift back with trend, and enter on the retest of that shift. Stop past the sweep, fixed R-target, flat by night.

3/

The honest edge number everyone asks for: across 1,343 trades, 62% go at least +0.5R my way and 41% reach a full +1R. Win rate is only 44% — low on purpose. The winners are bigger than the losers; that's the whole game.

One account, all three tickers: +251% trading through news, +163% if you sit out every FOMC / CPI / NFP day. Max drawdown ~12%. Worst day in 9.5 years: -1.61%. Real backtest trade lists. Not a signal service — just the system, with the receipts.

5/
Indicator created, Strategy testers ready. Let's roll! Mechanical full example trade on 16th of july.
